

Instant Savings Measures

Light Bulbs

Power Strips

Showerheads

Thermostats

Faucet Aerators

Identifying instant savings measures in your home

During your virtual energy assessment, the energy specialist will refer to areas in your home where there is potential for energy savings.

Taking photos of these areas may be valuable during the assessment process.

Light Bulbs

Light bulbs come in different sizes and types. Incandescent bulbs are inefficient and eligible for replacement.

Incandescent bulbs can be replaced free of charge with a similar style LED.

CFLs are not currently eligible for replacement.

Incandescent

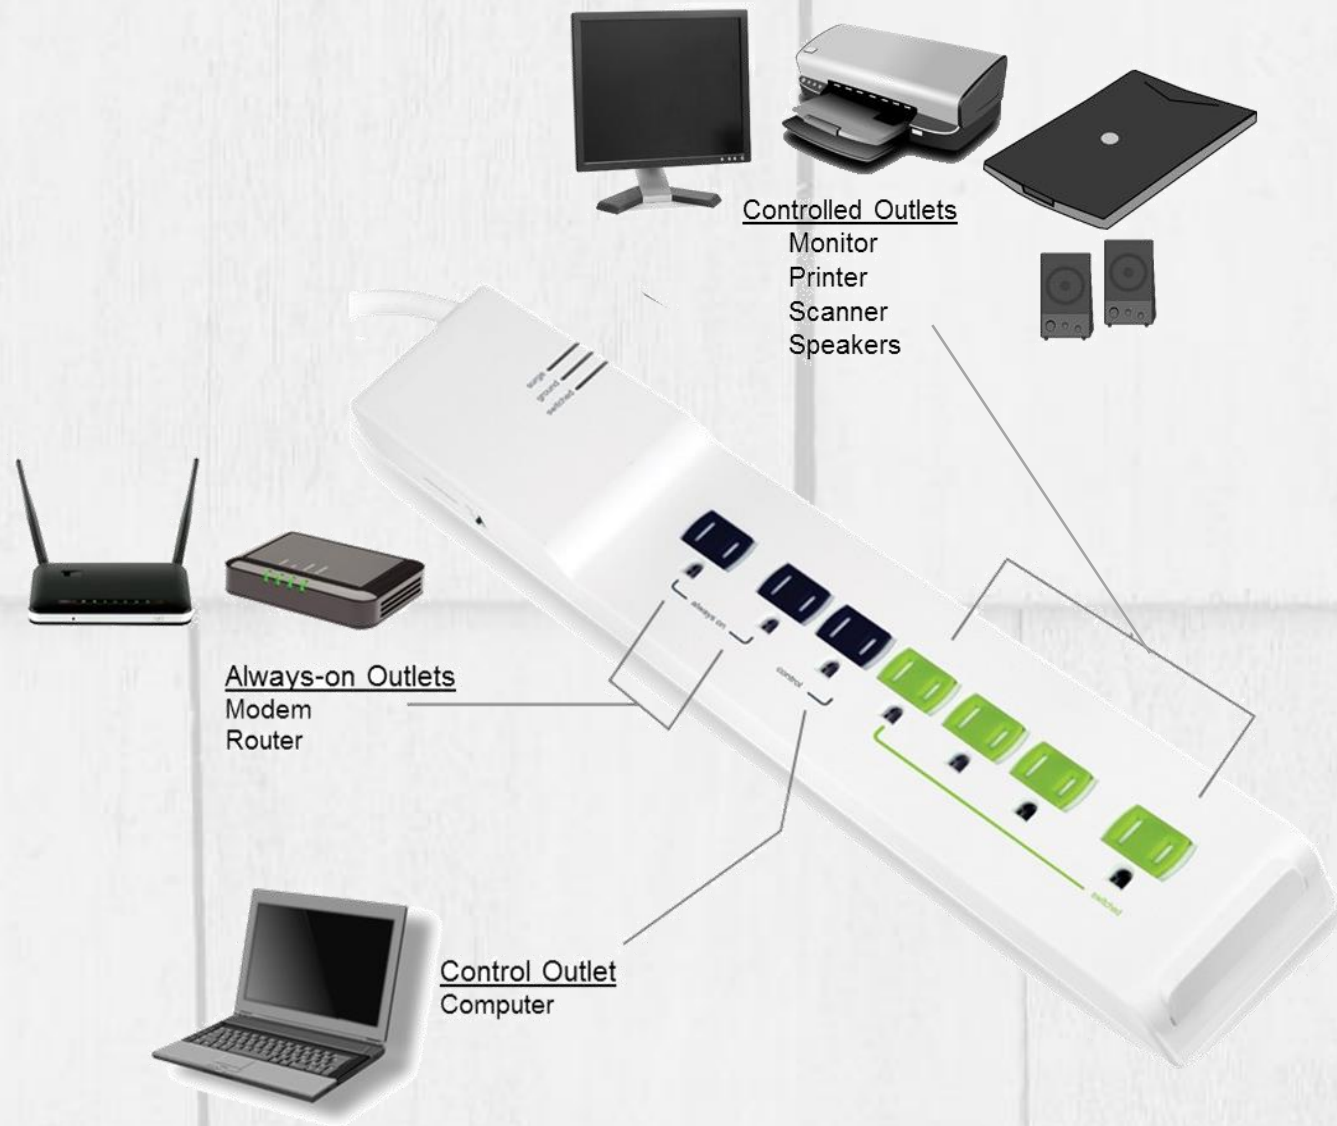

CFL

LED

Power Strips

As part of the energy assessment, you may also qualify for a no-cost Smart Power strips.

Replacing conventional power strips with advanced power strips helps reduce wasted electricity and, in turn, save on energy costs.

Thermostats

.....

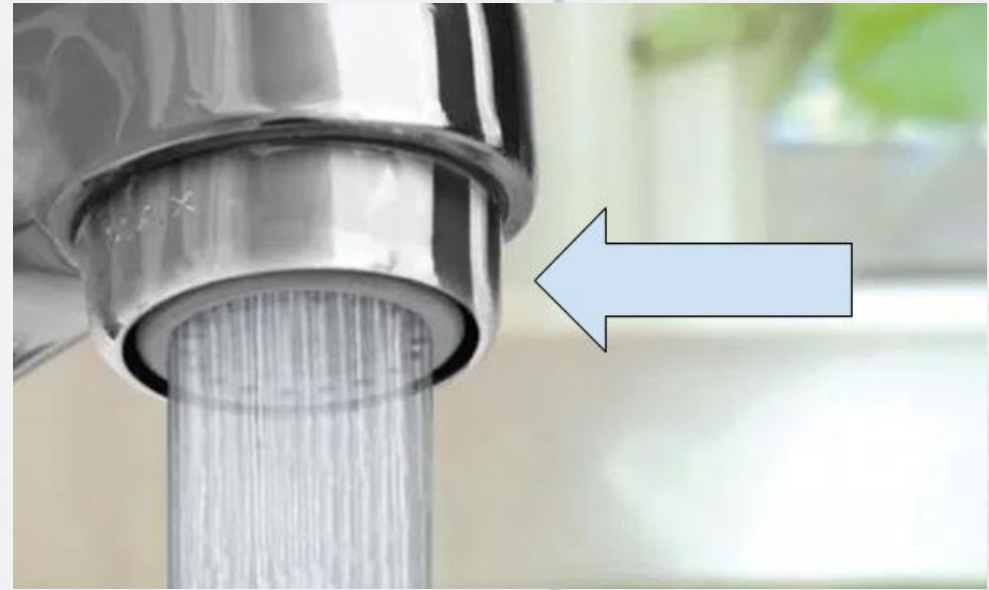

Thermostats may be eligible for replacement with programmable thermostats, take a photo of all thermostats in the home.

Programmable thermostats let you create multiple daily settings allowing you to set and save.

Faucet Aerators

Sink aerators may be eligible for replacement, your energy specialist may ask you to look at the flow rate, usually on the side of the aerator in GPM (gallons per minute).

2.2 GPM in this example

Showerheads

.....

You may also be asked to identify the flow rate, type and color of your showerhead. Flow rates can be found on the front, side, or near the fitting of the showerhead.
